USDA TO MEASURE THE FINANCIAL HEALTH OF U.S. AGRICULTURE

[PHOENIX, ARIZONA] – Farmers and ranchers will soon have the opportunity to set the record straight about the issues that affect them – and to help ensure that policies and programs are based on accurate, real-world data. This is the goal of the annual Agricultural Resource Management Survey (ARMS), conducted by the U.S. Department of Agriculture’s National Agricultural Statistics Service (NASS).

ARMS is USDA’s primary source of information on production practices, resource use and economic well-being of America’s farm operations and farm households.

“Just about every federal policy and program that affects U.S. farmers and farm families is based on information from ARMS,” said Steven Manheimer, director of the NASS Arizona Field Office. “This information is used not just by USDA and Congress, but also by farm groups, agribusinesses and others who make the decisions that shape the future of Arizona agriculture.”

Between February and the end of March 2010, NASS field offices will contact 35,000 farmers nationwide. Producers will be asked to provide data on their operating expenditures, production costs and household characteristics.

“All farm operators rely on quality information and sound government policies in order to run a successful business. That’s why participation in ARMS is so important,” Manheimer explained. “Producer participation in ARMS ensures that decisions affecting farmers, their families, their businesses and their communities are based on the facts, straight from the source.”

As with all NASS surveys, information provided by respondents is confidential by law. NASS safeguards the confidentiality of all responses, ensuring that no individual producer or operation can be identified. All NASS reports are available online at: www.nass.usda.gov.
